

## ASUS Eee PC 1005PR

Tuesday, 09 March 2010

Basically, most netbooks in the market are pretty sluggish and these can't even play proper high definition content. Personally, I believe that the netbook technology is gradually improving and if you are searching for a netbook that has enough resources and computational power to play HD content, perhaps you should take a closer look at the ASUS Eee PC 1005PR.

The ASUS Eee PC 1005PR runs on the following hardware specifications:

- 1.66GHz Intel Atom N450
- 10.1 inch 1366 x 768-resolution display
- 1GB of RAM
- 320GB hard drive
- Broadcom Crystal HD accelerator

Basically, with the Broadcom Crystal HD accelerator in place inside the netbook, you can watch full HD content smoothly, and playing YouTube's latest HD player wouldn't be a problem for your netbook anymore.
