

Pentax 40 Megapixel 645 Digital

Thursday, 11 March 2010

It seems Pentax wants to revolutionize the entire DSLR camera market, whereby they have recently disclosed their colossal 40 megapixel 645 Digital camera for the market. I'm pretty sure you might have seen a 20 megapixel camera, but surely, Pentax's 40 megapixel sensor would definitely make existing DSLR cameras in the market, pretty obsolete.

Generally, this particular DSLR also comes with a 3-inch rear LCD screen, 44mm x 33mm sensor, and it also comes with a pair of SD and SDHC expansion slots as well. There's also a dust removal system, and 77-segment multi-pattern metering system onboard as well. The camera can snap 800 images on a single charge, and it even comes with a whopping price tag of ¥850,000 (\$9,442).

Take a look at the gigantic 40 megapixel Pentax 645D:
