

## MSI Wind12 U230 Netbooks

Thursday, 11 March 2010

Not many people capitalize on AMD-powered machines, but surely MSI is an exception. Nevertheless, it seems MSI has recently released their latest Wind12 U230 netbooks into the market, whereby these netbooks will run on the latest AMD processors.

Generally, the Wind12 U230 netbooks will be powered by the following hardware specifications:

- 12.1-inch WXGA (1,366 x 768) display
- Windows 7 Home Premium
- 2GB of RAM
- ATI's Radeon HD3200 graphics
- 6-cell battery
- 802.11b/g/n WiFi
- 1.3 megapixel camera
- 3x USB sockets
- VGA / HDMI outputs
- 4-in-1 card reader
- Ethernet port

Basically, the Wind12 U230 netbooks will be powered by the AMD Athlon Neo MV-40, as well as the Athlon X2 L335 CPU. Also, the netbook will only weigh as much as 3.3 pounds, which I think is really light for its standards. Well if you love the Wind12 U230 netbook design, it's yours for only \$429.99 on Newegg.
